The Column System For Powerball

Synopsis

This book was written for the old Powerball matrix (5/59 + 1/35). However, the column set strategies outlined in this book can still be applied to the new Powerball matrix (5/69 + 1/26) and the Mega Millions matrix (5/75 + 1/15) as well as the EuroJackpot and EuroMillions matrixes. The Column System For Powerball is a unique lotto system that is fun and easy to learn. After five winning numbers (5 white balls) are randomly drawn out of a drum for Powerball (5/59) they are arranged in five positions from lowest to highest that form five columns of past numbers. This system shows you how to harness the power of column sets to help you pick the most likely winning number combinations. And this system is based mainly on column set strategy, so there is no wheeling, no positional analysis, and no sum ranges. Strategies for picking the red Powerball (1/35) are covered as well.

Customer Reviews

When I purchased this book I whole heartedly expected the same 1980's mish mash (odds/evens), (hot/cold) old school information from people who have never studied the previous draws. Then I read: more often than not one, two, or three groups are not represented. HOLY COW!!!! Okay don't get too excited (thinking to myself) read on. Then I read: Ninety percent have two of the same last

digits.OH MY GAWD somebody besides me actually studies the previous draws!!!!!!Thank You Darren Day for actually writing a book on the 21st century Power ball game.Darren DAY has read and studied the power ball numbers. He gives a thorough honest up to date picture of the draws. If you really want to know what is really happening in the power ball numbers this is the book to have.If this book were in print I'd definitely buy it!!This rating should be a ten but we only have a choice of five stars.This book tells you the truth about number patterns and what to look for when choosing numbers.

Like the previous reviewer, I wish these were published, even as a booklet, I'd buy that too. Darren has some good information here, with a focus on number groups also, to help zero in on your picks. When I saw "Column System" I had to see how he used that in his number selections. I am a fan of Gail Howard since the '80s, have her LMG book, have her other books and use her software to help discern hit patterns and frequency. If you can eliminate number groups, even if they are small-say 7/group for the smaller lotteries like our 5/37 it can help your win percent, and dropping the "losers". Picking the right numbers helps.I checked with Mega Millions was how many groups per draw were not included in the winning numbers. With a 5/75 draw, an average of 4 groups per draw were eliminated in the last 25 drawings, some had 5 groups out. That amounts to many losing numbers that can be eliminated! My software has Group count charts, and I do look at this. For games like PB, MM and Cash4Life which has 60 numbers, you know groups will not show-so start dropping some. If you are not in the habit of studying number groups, this download might change your playing habits.

I liked this book...worth every penny...

Greatest read.
